Commercial Games

T.B.A MMORPG

This is a confidential, next-generation Multiplayer MMORPG currently in development. It utilizes the Unreal Engine for the client experience and the high-performance Odin framework for all authoritative server-side game logic.

- **Tags:** Unreal, C++, Odin, MMORPG, Networking, Confidential, Current Project

Dawn of Piracy: Caribbean Tides

An Unreal/C++ Pirate RPG focused on open-world exploration, ship battles, and seamless boarding, all supported by a comprehensive quest system and advanced enemy AI. My engineering contributions included: Coding the Quest, Dialog, and Boarding Logic systems. Setting up the Gameplay Ability System (GAS) and contributing to enemy AI implementation. Developing design-specific tools and performing extensive back-end infrastructure work.

- **Tags:** Unreal, C++, RPG, GAS, CommonUI, 2+ year project

Yaguareté: The Game

is a third-person survival adventure set in the dynamic, living world of the Brazilian Pantanal, where you control a jaguar hunting, surviving, and adapting to constant natural and human threats. My engineering contributions included: Implementing all base code, including the foundational Hunt Mechanic and core movement/swimming logic. Developing the Quick Time Event (QTE) system and numerous different interactable objects throughout the environment.

- **Link:** [here](#)
- **Tags:** Unreal, C++, Adventure, Survival, Stealth, QTE, Movement Logic

Confidential 3D Card Game

This is a confidential multiplayer 3D card game developed in Unreal Engine, focusing on core mechanics and scalable architecture. My engineering contributions included: Architecting the client framework for reliable multiplayer gameplay; Implementing core card game logic, state management, and UI integration.

- **Tags:** Unreal, C++, Multiplayer, Card Game, Confidential, Networking

Personal Games

Horror Prototype

Horror Prototype is a solo-developed first-person psychological horror experience built in the Unity engine. The game traps the player in a non-Euclidean home, leveraging atmospheric tension and complex systems for an intense single-player experience.

- **Link:** [here](#)
- **Tags:** Unity, C#, Solo-Dev, Horror, Psychological Horror, Non-Euclidean, Sanity System

BitSouls

BitSouls is a solo-developed 2D Action-RPG built in Godot engine, heavily inspired by the Souls-like genre, featuring challenging combat and a distinct pixel-art aesthetic.

My engineering contributions (as sole developer) included: Developing the core combat system, including hit detection, player attack states, and stamina management; Implementing the enemy AI behaviors, projectile logic, and the level-up/inventory systems; Creating all UI/HUD elements and handling the overall game structure and asset integration.

- **Tags:** Godot, GDScript, Solo-Dev, Action-RPG, Pixel Art, Combat System

Maskborne

Maskborne is a cooperative, two-player horror puzzle game built solo using Unreal Engine 5. It serves as a proof-of-concept, demonstrating seamless networking and Steam API integration for a functional, networked multiplayer experience as well as AI working through the network. I've developed all multiplayer systems, including reliable Steam API connectivity and session management. Implemented core cooperative horror and puzzle mechanics. Architecting and coding the entire game's foundational structure within Unreal Engine 5.

- **Tags:** Unreal Engine 5, C++, Solo-Dev, Multiplayer, Networking, Steam API, Cooperative

Work Experience

Unreal Engine 5 Mid Game Engineer - Advancement Design

- Advanced engineering role focused on Unreal Engine 5 development, progressing from Junior to Mid-level status. Responsibilities include technical implementation and systems architecture for game projects.
- **Duration:** July 2025 – Present (Total tenure at company: 2 years 1 month).

Junior Game Engineer - Little Candle Games

- Full-time engineering position working remotely for a Washington-based studio, developing a Multiplayer MMORPG.
- **Duration:** April 2026 – Present (2 months).

Unreal Engine 5 Mid UI Programmer - Galleon Studios

- Freelance role focused on high-density interface engineering for an unannounced strategic title. Specialized in C++ for UE5 UI, CommonUI, and complex input routing.
- **Duration:** October 2025 – December 2025 (3 months).

Unreal Engine 5 Mid Gameplay Programmer - Febatis Studio

- Freelance gameplay programming role utilizing Unreal Engine 5, with a focus on collaborative workflows using Git and Azure DevOps.
- **Duration:** July 2025 – September 2025 (3 months).

Studies

Details about my educational background, courses, and certifications.

Master of Science - MS, Administração - FEA-USP

- **Brief Description:** Advanced research focusing on the ecosystem of the game industry.
- **Duration:** March 2026 – December 2027.

Bacharel, Computer Technology/Computer Systems Technology - USP

- **Brief Description:** Bachelor's degree with a focus on data structures, prototyping, and information systems.
- **Duration:** 2022 – 2025.

High School Diploma - WAY American High School

- **Brief Description:** Secondary education completed with a 3.8/4 GPA, achieving fluency in English and studying subjects such as Economy and Politics.
- **Duration:** November 2017 – December 2020.

Associate's degree, Game and Interactive Media Design - Microcamp

- **Brief Description:** Practical study of the game creation process, including the development of a project built entirely in Unreal Engine.
- **Duration:** April 2017 – February 2019.
